

Knowledge Co-Creation Program (Group and Region Focus)
“Vegetable Production Technology for Livelihood Improvement of Small-Scale Farmers”

On September 18, 2020, the closing ceremony of the second year of “Knowledge Co-Creation Program (Group and Region Focus) on Vegetable Production Technology for Livelihood Improvement of Small-Scale Farmers” was held at JICA Tsukuba. This year’s program was held for about seven months from the end of February. Due to the influence of COVID-19, the participants could hardly get out of the premises, could not go on study tours, and it was difficult in adjusting the schedule of the lectures, etc. At the same time, there were many inconveniences in daily lives and health for participants. Even in such difficulties, they looked reliable to work hard for their own country in Japan, away from their families, and all of them patiently completed their daily training tasks. The knowledge and experience gained under unprecedented circumstances will surely help to cultivate the future of each community. We look forward to the future activities of the eight participants from eight countries.

PCM Lecture

Practice of soil sample collection

A survey of onion growth

Making rice straw compost

Making rice husk charcoal
